

Javascript Use Cases

Call a function

```
function greetUser() {  
  return "Welcome to code to go!";  
}  
  
let result = greetUser();  
  
console.log(result);
```

Welcome to code to go!

Add class to element

```
<div id="box"></div>
```

```
const element = document.querySelector("#box");  
  
// Note: only class name, without the '.'  
element.classList.add("class-name");
```

Capitalize first letter

```
let str = "welcome to code to go";  
str = str[0].toUpperCase() + str.substring(1);
```

Welcome to code to go!

Convert JSON to string

```
const object = {  
  id: 1,  
  name: "Leanne Graham"  
};  
  
JSON.stringify(object);
```

`{"id":1,"name":"Leanne Graham"}`

Change CSS property

```
<div id="box"></div>
```

```
const element = document.querySelector("#box");  
  
//change background-color  
element.style.backgroundColor = "red";
```
